

Who are we?

Towernet is an independent provider of services for the wireless telecoms industry.

What do we do?

We own and operate our own radio sites providing facilities including:

- Mast and rack space
- Mast supply and erection
- Antenna and rigging services
- Line of sight (LOS) surveys.

Can we help you?

As we are independent we can accommodate multiple operators onto our sites. You will see from our [Customers](#) page that we have accommodated a broad range of wireless operators.

It is important for us to provide as much coverage as possible for our clients and to make this possible we forge links with other radio site providers.

Whether you are a wireless operator or a site owner, get in touch with us here to see how we can help you.

We believe the future is wireless!
